

**Annual Report
of the
Lafayette Police Department
2004**

June 24, 2005

The Honorable Tony Roswarski
Mayor
City of Lafayette, Indiana

Dear Sir:

The Lafayette Police Department respectfully submits its Annual Report for calendar year 2004 in conformity with the policies of the Department.

This report primarily provides an overview of crime and traffic statistics as well as a brief look at our achievements during the previous year. Examination of the data contained will allow comparison of our successes with previous years as well as evaluating our successes or our shortcomings to regional and national averages as provided by the FBI in their annual crime reports.

During 2004 our department established a comprehensive web site, which contains much of the information we formerly presented only in our Annual reports, plus much more. That information has been maintained and updated frequently and for that reason this report has been reduced to basic statistical data.

In closing, we appreciate the continuing partnership with citizens throughout the community. We encourage citizen feedback on issues concerning their police department. We are grateful to all city officials, members of the judicial system, and the other law enforcement agencies in Tippecanoe County for the support we have received from each of them. We look forward to forging an even closer partnership with the community in the future.

Sincerely,

James D. Roush
Chief of Police

Lafayette Police Department

The Mission of the Lafayette Police Department is to efficiently provide quality police service to our community by promoting a safe environment through a police-citizen partnership, with an emphasis on mutual trust, integrity, fairness and professionalism.

Department Roster by Rank
Effective December 31st, 2004

Rank	Name	Appointment Date
Chief	James D. Roush	12/04/89
Deputy Chief	John R. Dennis	11/10/84
Captain	Kevin W. Gibson	04/08/78
Captain	David H. Payne, Jr.	07/20/85
Captain	Bruce A. Biggs	02/12/01
Lieutenant	Jeanette L. Bennett	07/16/74
Lieutenant	Steven L. Hartman	12/05/77
Lieutenant	Isidore H. Hatke	04/09/83
Lieutenant	Kurt A. Wolf	03/31/84
Lieutenant	John W. Withers	11/03/84
Lieutenant	Brad A. Hayworth	03/29/86
Lieutenant	Christopher T. Downard	06/20/87
Lieutenant	Christopher A. Weaver	06/20/87
Sergeant	Robert Q. Robinson	01/16/76
Sergeant	Gary G. Bennett	10/21/77
Sergeant	Thomas M. Rankin	06/28/80
Sergeant	Max D. Smith	02/07/81
Sergeant	James F. Taul	12/10/83
Sergeant	Robert M. Baumgartner	10/18/86
Sergeant	Tony A. Kenner	11/10/86
Sergeant	Gregory N. Dale	09/07/94
Sergeant	Patrick J. Flannelly	03/20/95
Sergeant	Thomas A. Davidson	03/27/95

* Appointment date is to the department, not to the rank.

Growth at the Lafayette Police Department has remained steady for the past five years. By the end of 2004 the department had grown to 115 sworn officers. At the beginning of 2000 the department budget allowed for 97 sworn police officer positions and by 2003 the department increased to 112 sworn. During 2002 there were 1.775 officers serving each 1000 citizens. At the end of 2004 that ratio stood at 1.9 officers per/one thousand citizens. Those ratios are based on an estimated population of 60,400. At an estimated population of just over 60,000 it requires six additional officers to raise the ratio of officers to citizens by one tenth of a point. In other words the difference between 1.8 officers per one thousand population and 2 officers per one thousand is 12 officers. That, of course, assumes the population remains static at 60,000. While we have shown that basic services can be maintained with fewer officers LPD believes the community expects and deserves something beyond the basics. With a ratio of greater than 2 officers per 1000 community services could be maximized, existing programs expanded and new programs explored and developed to deal with crime prevention.

Major Offenses, Crime Rates, and Clearance Rates 2004

Each year the FBI publishes a report based on crime rates and clearance rates nation wide. The figures come from the Uniform Crime Reports (UCR) submitted to the FBI each month by over 17,000 city, county, and state police departments across the country. The UCR program was established in 1929 in an effort to provide a reliable set of criminal statistics for use in law enforcement administration, operation and management; however, its data have over the years become one of the country's leading social indicators. Information generated by the UCR is widely used by sociologists, legislators, municipal planners, and the media.

The Federal Bureau of Investigation defines *Crime Index Offenses*, more commonly referred to as major offenses, for statistical purposes. There are eight categories of crimes, four of which are classified as **property crime** and four that are classified as **violent crime**. Those classified as *Property Crimes* are burglary, larceny/theft, motor vehicle theft and arson. Robbery, aggravated assault, forcible rape, and murder are classified as *Violent Crimes*. Both national and local totals reflect only those crimes known to law enforcement agencies. The Crime Index Offenses reported do not represent all crime in the country but the categories selected for reporting provide a balanced, fair, and comprehensive overview of trends nationwide.

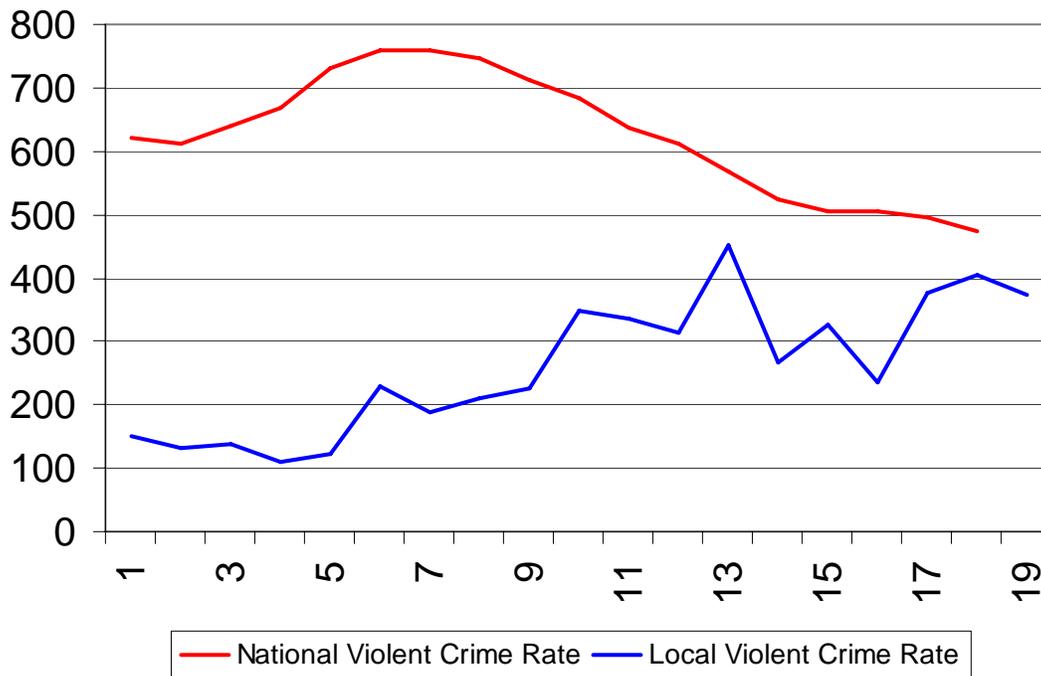

The raw crime numbers reported to the FBI and published in their annual *Crime In the United States* would provide very little useful information if it were not **converted into Crime Rates**. The Crime Rate (Also sometimes referred to as the Crime Index) is a way to measure crime in relation to population. It is usually expressed as a ratio of crimes per 100,000 inhabitants. Without such a conversion of the raw numbers it would be impossible to compare communities or the success of law enforcement efforts in those different communities. Communities as different as Lafayette, Delphi, and Gary, Indiana, Fairfax County, VA, Atlanta, GA, or Santa Cruz County, Arizona all report vastly different raw numbers to the FBI. At the same time the populations of those communities are vastly different as well. By converting the number of actual crimes into crimes per 100,000 we can make both fair and meaningful comparisons between the communities. Communities can compare their rates to other individual communities, to states, regions or to the national averages.

Population estimates used for Lafayette for 2003 & 2004 were 60,400. The calculation for figuring the crime rate is the actual number of offenses reported multiplied by 1.65565. All comparisons between local and national rates compare national rates from the previous year since the FBI does not release their report until September of the following year.

Chart 1, shown below illustrates the Violent Crime rates for both Lafayette and the Nation as a whole for the years of 1986 through 2004. Crime rate comparisons for violent crimes indicate that during 1997 Lafayette had a rate of 315 per 100,000 inhabitants while the national average was 611. Nationally the trend of violent crime has been downward since record highs at the beginning of the previous decade. Locally violent crime has trended slowly upward but still remains well below national averages. During 2003 the violent crime rate in Lafayette was 403.9 per 100,000 persons. During 2004 we enjoyed a significant drop to 372.5 per 100,000 persons. Last year instances of violent crime accounted for 6.47% of all reported crime in our community which is a slight drop from the prior year.

Chart 1

Local and National Violent Crime Rates 1986-2004

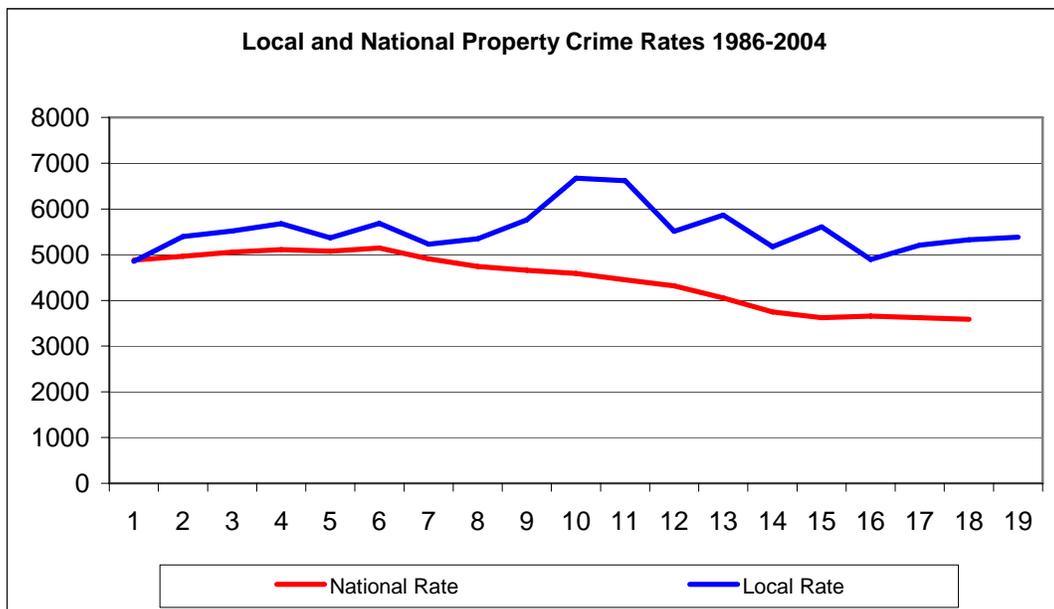

Lafayette saw a slight increase in property crime rates during 2004. Overall about 100 fewer thefts were reported but all other categories saw increases. Nationally, crimes of Larceny/theft account for nearly 60% of the total crime reported but for the past several years thefts have accounted for closer to 70% of all reported crime in Lafayette. The property crime rate in Lafayette for 2003 was 5322 and for 2004 it increased slightly to 5382 per 100,000 residents.

Chart 2 illustrates a comparison of the property crime rates for Lafayette to the national rates since 1986. It clearly shows Lafayette has had higher than national average rates since 1986, however, since 1995 those rates have trended downward and our property crime rate in 2001 was as low as it was in 1986. Each of the past three years has seen a slight increase in the property crime rate locally.

Determining a reason for the difference in the property crime rates between Lafayette and the nation as a whole is difficult. Many things influence the occurrence of crime in a community. Textbooks have been written in an effort to answer the broad question of the causes of crime and how to combat rising crime. Larger populations yield more reported crime but it is simplistic to say we have “more crime” simply because we are a growing community. Crime rates themselves are population neutral, which is why the figures are converted to rates. Lafayette is a rapidly growing community; changes in population demographics, neighborhood changes, the state of the economy, the police response to crime, the public response to crime, and many other factors have an effect on the occurrence of crime. Successful crime fighting is a community wide affair. Law enforcement cannot hope to battle crime without the community.

[Chart 2](#)

Cause for Alarm?

The previous charts comparing local crime rates and national crime rates might seem to be cause for some alarm. Closer evaluation of those charts with an understanding of the methods used to gather crime statistics, and some knowledge of how other departments operate provide a less worrisome view of local numbers. For the United States, violent crime has accounted for 12 to 13 percent of the total crime reported to police during each of the past five years. In Lafayette the percent of all crime that is classified as violent crime has always been much lower than the national average and this continues to be the case. During 1998 violent crimes as a percent of total crime peaked in Lafayette at 7.1% and then declined to 4.9%, 5.4 %, and 4.6% during 1999, 2000, and 2001 respectively. During 2003 violent crime increased to 7.05% but fell again during 2004 to 6.47% of all crime reported to our department, which remains well below the national average of 12.1%

There will always be many more peaks and valleys in a chart that is based on a small number of local incidents. It is often very difficult, if not impossible, to draw meaningful conclusions about trends from one year to the next when a small number of events can cause what appears to be a major rise or dip along a chart.

The only crimes included in the Uniform Crime Reports are those known to police (reported). A recent Justice Department survey reports that as many as half of all violent crime may not be reported to any police agency and only about one third of all property crimes are reported. This is probably even truer in very large metropolitan areas. Many reasons can be cited for under reporting. The perception by victims that little or no good will come of the efforts they make to report the crimes, fear by some victims to draw the attention of the criminal justice system to themselves or even the fact that many police departments discourage reporting, either intentionally or unintentionally. This phenomenon of under reporting was illustrated in Lafayette last year when the LPD partnered with one local neighborhood to target crime in that area. Calls for service were counted for the 6 months prior to the beginning of the program and then counted again for the same time period the year following the inception of the program. What we discovered was that calls for service from that neighborhood actually increased significantly after the program began. In comparing actual number of violent crimes prior to the program and for the period after the program began we noted a significant drop in violent crimes that we attribute to the involvement of the neighborhood /police partnership.

Some departments require the victims of minor property crimes to "mail in" such reports or to make such reports in person at a precinct. The Lafayette Police Department makes every effort to document and record each complaint received from citizens, no matter how trivial they may seem. We will even take some kinds of reports directly via the Internet.

Clearance Rates

Clearance rates, or the amount of crime solved in Lafayette remains very good news. During 2004 Lafayette Police officers solved 29.7% of all crimes reported. Nationally the total number of reported crimes solved during 2004 was 19.8%

For purposes of the Uniform Crime Report, a law enforcement agency clears (solves) an offense when at least one person is arrested, charged with the commission of the offense, and is then turned over to the court for prosecution.

Another method of clearing an offense is by *exceptional* means. When some element beyond law enforcement control precludes the placing of formal charges against the offender an *exceptional clearance* may be taken. Examples of such a case might include the death of the offender before they are tried for the offense, the victims refusal to cooperate with prosecution after the offender is identified, or the denial of extradition because the offender has been charged with a crime in another jurisdiction and is being held there.

The Lafayette Police Department has consistently had a higher than average clearance rate and that remained true for calendar year 2004. In fact, since 1984 the clearance rate for the nation has remained at or near 21% while the clearance rate for the Lafayette Police Department has ranged from 24.2% to 37.7%.

During both 2001 and 2002 the Lafayette Police enjoyed an overall clearance rate of 27%, compared to the national clearance rate of 20%. During 2003 our clearance rate increased slightly to 29%. All 30 reported rape cases were solved during 2003 in addition to three other cases from 2002; Forty-eight percent of the robberies and ninety-seven percent of the aggravated assaults were cleared. Clearances for crimes against persons are generally higher than property crimes as crimes against persons are often given more intensive investigative efforts and the victims and or witnesses can frequently identify the perpetrators.

The department is proud of these figures. This consistently high clearance rate is the result of the training, hard work, and dedication of the officers and detectives of this department. Complete and careful investigations are the rule, not the exception at the Lafayette Police Department.

The numbers in this chart are the **raw numbers** of crimes reported to our department during 2004. It is from these numbers that the previously explained crime rates and clearance rates are calculated. This chart and the two following represent the bulk of the raw data that was supplied to the FBI by our department during 2004. The ten page UCR monthly reports that we submit further subdivide this data. For example: reported robberies are divided into seven sub-categories, thefts into three sub-categories based on values and nine sub-categories based on nature. In addition information is collected on Law Enforcement Officers Killed or Assaulted, arrest statistics including total numbers by charge as well as by age, sex, race, and ethnic origin of persons arrested. In the past much of the compilation of the UCR involved manual counting by Records Clerks. Our current Records management software automates much of the UCR report.

It would be beyond the nature and scope of this report to include all the sub-categories from the UCR reports. For that reason only the most basic totals are included here. That does not imply that this report is incomplete. This ([Chart 3](#)) chart could be considered the “report card” for the Lafayette Police Department for calendar year 2004. These numbers are submitted to the FBI Uniform Crime Reporting System and added to information from more than 17,000 police agencies around the country.

Charts 4, 5, and 6 all deal with the direct monetary loss attributed to crime in our community and measure in another way the effectiveness of police investigations based on the values of items recovered. Nationally, during 2003 the aggregate value of stolen items was over \$13 billion dollars of which 34.2% (by value) was recovered. Values of property stolen in Lafayette during 2004 was nearly \$2.4 million of which LPD recovered 41% (by value).

Comparing average losses per incident between Lafayette and national averages show that our average theft or burglary have been less costly than the national average but the 2004 loss from robbery was slightly more than the national average and each instance of auto theft was nearly identical to the national average. The average loss figures reported to our department and the averages one derives from national numbers are probably not indicative of a major difference in the nature of crime between Lafayette and other places. It is not likely that burglars in Lafayette are routinely stealing items of less value than the “average” burglar in other places. The more likely scenario is that the Lafayette Police department receives reports of more instances of crime with little or no loss reported simply because we encourage full reporting by all victims of crime and in general our population is more likely to report crimes, no matter how insignificant they may seem. It is our position that even though full reporting involves more effort on our part, (from receiving to investigating to recording) we would prefer to have this more complete and accurate reporting and feel that even small incidents are an important quality of life issue for our community.

Chart 8 breaks down the Lafayette Police Department arrest figures for an eleven-year period and compares numbers of adults arrested to numbers of juveniles arrested. The raw numbers are shown for adult and juvenile arrests and in addition those numbers are then shown as a percent of the total arrest figure for each year.

During the past decade the Lafayette Police Department has arrested MORE THAN 50,000 persons. That figure does not include traffic infractions. Two conclusions one might make from reviewing chart 8 is that the number of juveniles arrested has remained fairly steady over the given time period while the number of adults arrested has generally trended upward. As a result Juvenile arrests have trended downward as a percentage of all arrests. At the beginning of the last decade and before that time juvenile arrests averaged about one third of all arrests from year to year. Since 1994 that percent has declined to about 20% for the past 5 years and the average for the whole 11-year period ws 25%.

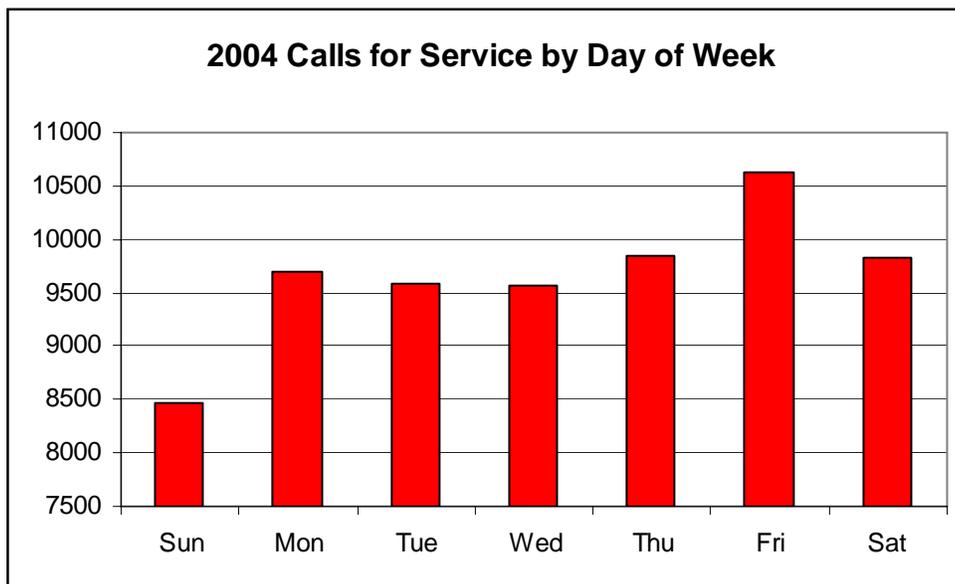

CALLS FOR SERVICE 2004

During 2004 the CAD system logged 67,643 of which more than 24,000 were E-911 calls. These calls represent everything from barking dogs, traffic stops, to robberies or personal injury accidents, there are in fact more than 100 different categories or nature codes for the kinds of calls the dispatch center deals with. In addition the dispatchers handled more than 4600 Fire Department calls. The system records both calls that originate with a public complaint as well as officer-initiated calls. The vast majority of all calls routed through our communications section involve our Patrol Division either directly or indirectly.

For all calls received by our department during 2004 the average response time was about 7 minutes. Depending on the available manpower, weather, traffic, driving distance for the dispatched units, total numbers of calls already being investigated and the seriousness of those calls, it is possible that some non-priority calls may not be serviced by a patrol officer for at least 15 min. or longer under unusually busy conditions. High priority emergency calls are usually answered in about 3 minutes.

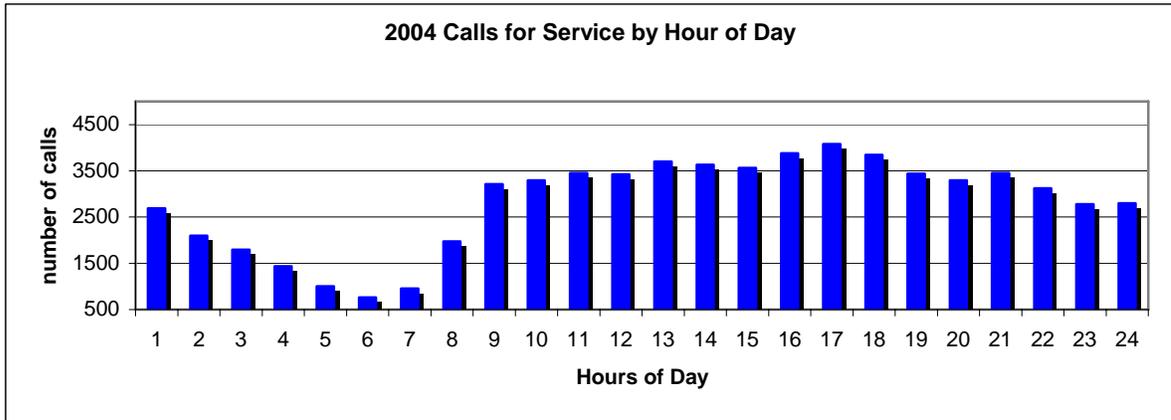

The following chart breaks down all calls for service during 2004 by day of the week. These findings vary but a small amount from the usual ratio we have seen in previous years. Friday remains the busiest day of the week for our police department while Sunday is most often the least busy day, however the difference for an entire year was only about 2000 (or 38 per day) calls difference between the most busy day of the week and the least busy day of the week.

Chart 9

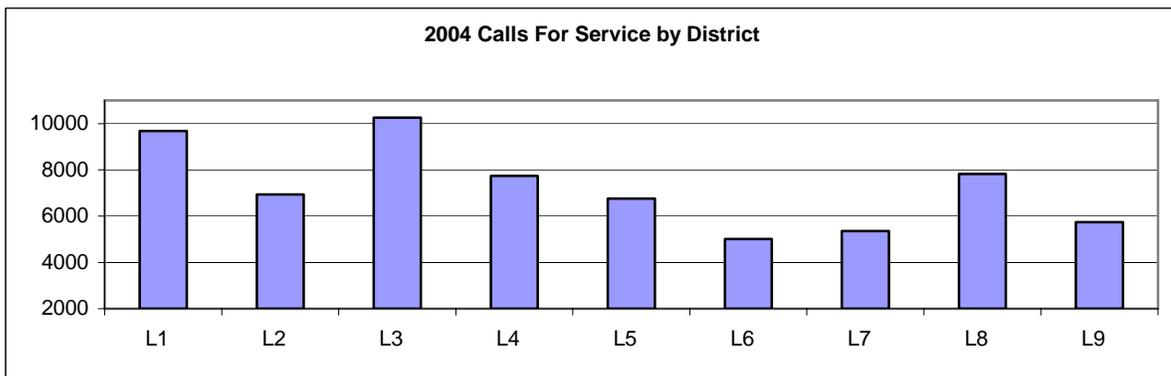

The following chart, based on numbers from 2004, is nearly identical to charts showing this information for prior years or multiple years. The two busiest times of the day for the Lafayette Police are between Noon and 1:00PM and the three-hour period from 3:00PM to 6:00PM. If the public calls during those peak hours there is more likely to be a delay in response time during those times than during any other hours of the day.

Chart 10

The city is divided into 9 patrol districts. During a patrol shift a patrol officer is assigned to each district. Additional coverage may be provided by having one or more “general” cars on patrol but not assigned to a specific part of town. The following chart represents the total calls for service from each of the 9 police districts. While call volume alone is not the determining factor or in laying out the geographical boundaries of a district it is one component.

Chart 11

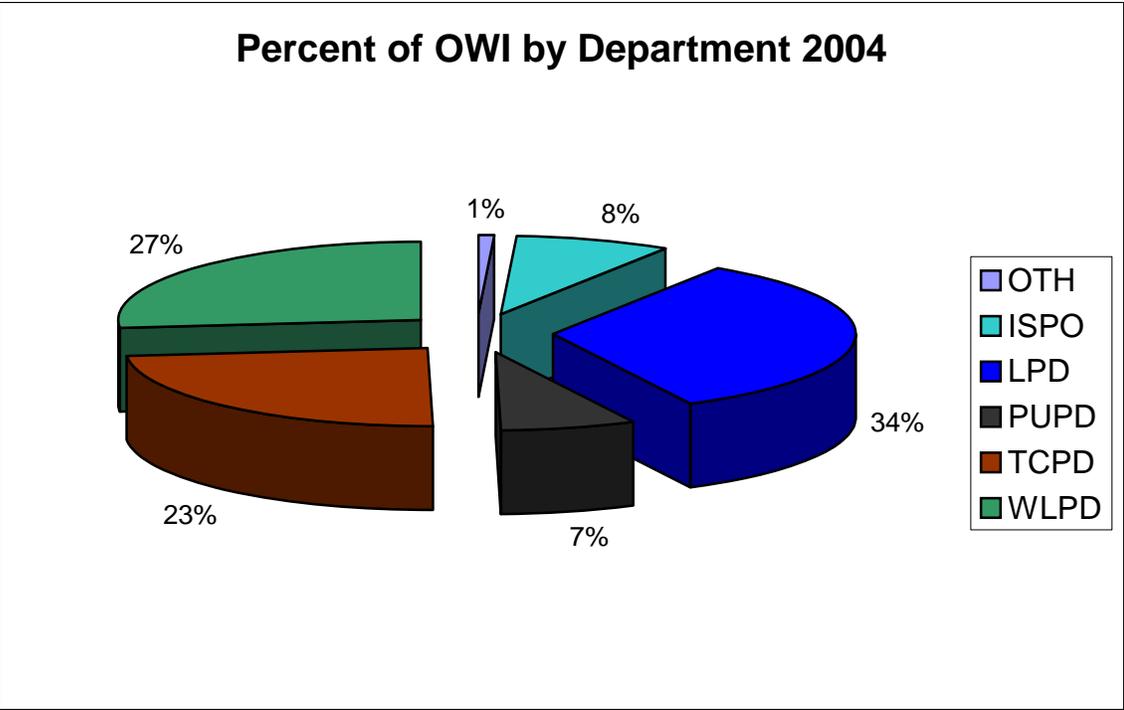

Traffic Statistics 2004

Chart 12
Traffic Tickets Issued by Type

Type of Violation	1996	1997	1998	1999	2000	2001	2002	2003	2004

GRAND TOTAL	5632	6502	6559	6728	13113	15544	12556	8648	8895

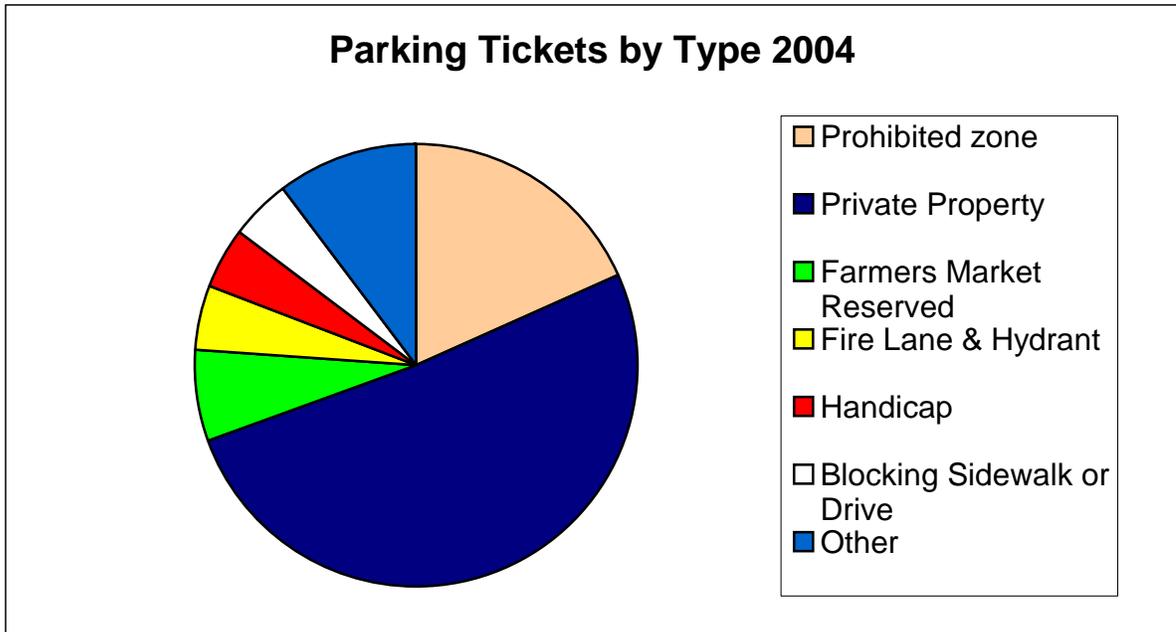

The three most active LPD patrol officers for OWI enforcement made 27% of all the OWI arrests made by our department. The ten most active LPD patrol officers together made slightly under 60% of all the OWI arrests made by our department in 2004 and our department made over one third of all OWI arrests in the county last year.

Chart 13
Tippecanoe County Comparison

Parking Tickets Issued and Paid in 2004

The police department issued 647 parking tickets during the past year. In addition 1127 Five and Fifteen Day Notices were issued during 2004. Two hundred thirty seven of the vehicles that were tagged with 5 or 15 day notices were later towed. These ordinances are used to regulate the storage of disabled or unused vehicles on the city streets as well as on private property. The vigorous enforcement of those two ordinances improves the quality of life in neighborhoods. Abandoned and inoperable vehicles that have become eyesores might otherwise sit for years.

Vehicles Towed 2000-2004

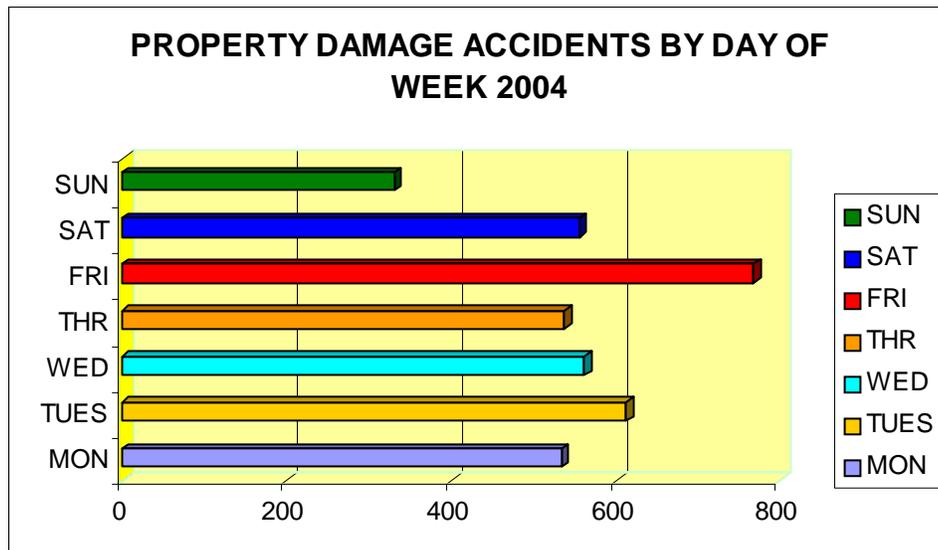

Reason towed	2000	2001	2002	2003	2004

FRIDAY: THE MOST DANGEROUS DAY OF THE WEEK TO DRIVE IN LAFAYETTE?

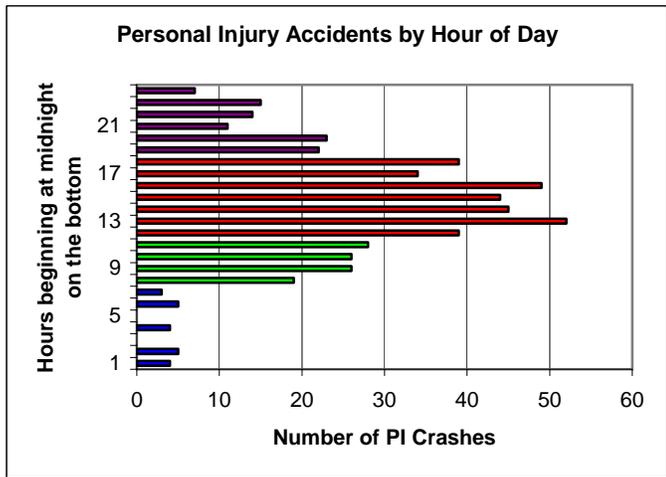

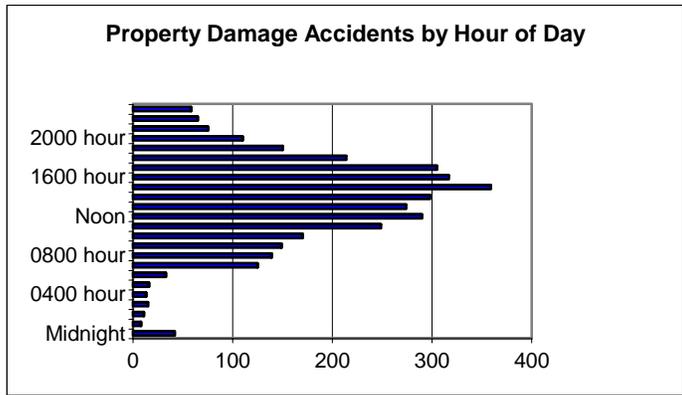

The numbers shown in the above chart indicate that the average Friday in Lafayette usually records a significantly higher number of property damage accidents than any other day of the week while an average Sunday has significantly fewer reported. The differences between the numbers reported on other weekdays are probably not statistically significant and the chances of being involved in an accident on any of those given days are about statistically even. During 2004 the chances of being injured in a traffic crash was nearly the same for both Friday and Tuesday, however if you examine a longer period of time it appears the high number of crashes recorded on Tuesdays during 2004 does not follow the longer term trend which indicates Fridays have historically been the highest crash injury day.

The following chart shows Property Damage accidents reported during 2003 by hours of the day. As might be expected, the hours between 4 p.m. and 6 p.m. had substantially higher numbers of crashes than any other time of the day.

Citizens Police Academy

Two sessions of Citizens Academy were offered during 2004. A total of 27 citizens completed the 10-week sessions. A total of 50 hours of classroom instruction was provided during the two sessions along with at least two patrol ride-along experiences for each of the participants. Twenty one officers provided the classroom instruction in a variety of topics including, Laws of Arrest, Patrol Operations, SWAT, Training, Polygraph, Use of Force, Traffic, CSI, Identity Theft & Fraud Investigations, Juvenile Issues, and several others.

College Intern Program 2004

Six college students completed internships with the Lafayette Police Department during 2004. Each student completed between 150 and 200 hours observing and working in all divisions of the department. Each one also completed various written assignments. In no particular order the College Interns for 2004 were Mike Smulski of Purdue, Austin Gordon of Ivy Tech, Joshua Silko of Valparaiso University, Justin Williams of Vincennes University, George Kikuchi (Graduate student) Purdue University, and Kelsy Stinemetz of Purdue.

DARE

Thanks to generous corporate donors the Lafayette Police Department was able to add a first class mobile education unit for use of the DARE program. Unveiled on the south lawn at Vinton School on October 7th the 2004 Ford Explorer and matching trailer were the gifts of several local organizations and businesses.

We wish to thank the following for their continued support of the Lafayette Police Department and the local DARE program. The Lafayette Eagles Lodge, Raisor Ford, Lafayette Orthopedic Clinic, AFSCME Local 3412, Ovation Audio-Video, Pyramid Sign and Design, and Rain Forest Car Wash. In addition we wish to thank the Lafayette Optimist Clubs for their continued support of the Dare Program.

Acknowledgements

This Annual Report is based on department data from 2004. It is our desire that this volume will provide administrators, public officials, the media, and the public an informative look at the operations of the Lafayette Police Department over the previous year.

During the completion of a work such as this, information is gathered from many sources within the department as well as some external sources. Without the aid of Chief Records Clerk, Helen Hession, CAD Administrator Yvonne Budreau, both Kelly Fohr and Lt. J. Bennett of the Traffic Section, and Administrative Assistant to the Chiefs of Police Jacki Stockment, there would have been no department statistical figures with which to work.

The viewer familiar with previous editions of this annual report may notice it is much thinner than previous editions and contains no photographs. Because much of the information previously found in the printed version of our Annual Report has been duplicated on our web site this volume should be considered only as a supplement to that online document. This document is a concise, ready source of the raw data concerning crime in our city and contains basic information concerning department operations during 2004. For a more comprehensive view of our department please visit us regularly at WWW.LAFAYETTEPOLICE.US
